- 2-67 Permits for Dredge and Fill in State-Owned Wetlands
- 2-67 Operation of Heavy Equipment in Wetlands
- 2-68 Approval of other Activities in State-Owned Wetlands and Buffers

# Chapter 2

## AREAWIDE LAND MANAGEMENT POLICIES

### Introduction and Definitions

---

This chapter presents land management policies for each of the major resource or land use categories affected by the plan: agriculture and grazing, cultural resources, fish and wildlife habitat, forestry, materials, public and commercial recreation resources, remote cabins and trapping cabins, settlement, subsurface resources, and transportation. The chapter also presents management policies for several specific land management concerns: lakeshore management, public access, stream corridors, instream flow, trail management, and wetlands management. These policies apply to state land throughout the region, regardless of the land use designation.

In addition, this chapter summarizes the land allocations for each resource.

The policies in this chapter consist of goals and management guidelines. Goals are the general condition the department is trying to achieve and the guidelines are specific directives that will be applied to land and water management decisions as resource use and development occur.

Definitions for terms commonly used in this chapter are listed in the Glossary in Appendix A.
