4. MANAGEMENT PLAN: LAND MANAGEMENT POLICIES FOR INDIVIDUAL UNITS

This chapter describes the management plan for managing the Matanuska Valley Moose Range.

The Moose Range is divided into three management subunits - the Western, Middle and Eastern. Each subunit is described individually and includes background information, a management intent statement, subunit specific management guidelines, and a land use designation summary.

Map 10, the Land Use Plan Map on page 199, shows the areas of management for each resource. The map should be referred to as the reader reviews each individual subunit to aid in clarifying areas of proposed resource management.
